

BGA Variable Pitch and Array Kit

Mix and match components to configure your custom kit.

Practical Components is now offering a “one-of-a-kind” BGA Variable Pitch and Array PC Board. Each board contains matrices for the most popular ball pitches found on BGAs and CSPs. The use of full matrices allows maximum flexibility for placing parts with

full, staggered, or perimeter configurations. Each board has a mixture of even and odd matrices to enable placement, using automatic equipment, of the highest ball counts available.
